## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2-3, 8-9, 14-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2, line 6, the term "Pj" is not defined and renders the claim indefinite. It is unclear if Pj represents a different integer or if its formula is  $P * j$  where j is defined and P is still not defined. (this also applies to line 11 for Pj/M where j and M are both defined but P is not defined).

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 20 is rejected under 35 U.S.C. 102(e) as being anticipated by Logue et al. U.S. Patent 6,445,232. Logue et al. shows all of the claimed subject matter of a clock multiplying pll circuit in figures 1-8.

Regarding claim 20, a clock multiplying PLL circuit for outputting an output clock signal (O\_CLK) having multiplied frequency obtained by multiplying an input reference clock signal (Ref\_CLK), comprising: an oscillator circuit 270; and a multiple control circuit 260 for performing PLL-control on the oscillator circuit by a predetermined number of times greater than or equal to 2 for each cycle period of the reference clock signal. (see Figs. 3b and 6)

***Allowable Subject Matter***

5. Claims 1, 4-7, 10-13, and 16-19 are allowed.
6. Claims 2-3, 8-9, and 14-15 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record neither teaches nor suggests all of the claimed subject matter of claim including first through nth phase comparators (meaning 2 or more) for respectively comparing phases of the l-th reference clock signals and the i-th divided signals. Logue et al. only shows one comparator and would not have been obvious to modify Logue et al. to have more than one comparator.

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Logue U.S. Patent 6,448,915 and Hori U.S. Patent 5,511,101 show similar inventions.
